and Google Maps®

For hikers, bikers, joggers, or anyone who requires a passive data logger to record and store waypoints from traveled routes will find the DG-200 to be the perfect solution. The GlobalSat DG-200 uses an integrated SiRF Star III GPS chipset and is capable of recording up to 190,000 waypoints into its internal memory. The stored data, which includes time, date, speed, altitude and GPS coordinates, can then be uploaded to your PC for viewing on third-party maps such as the free version of GoogleEarth®. The included interface utility will allow you to configure the DG-200. Once programmed, activities like hiking, jogging, running, biking or driving can be recorded accurately.
